

Item Definition

1 Purpose of the document

The system under development must be fully understood and described in order to ensure that all activities of the safety lifecycle can be adequately executed and that the hazard analysis and risk assessment can be elaborated with the correct assumptions.

2 Description of function (simplified)

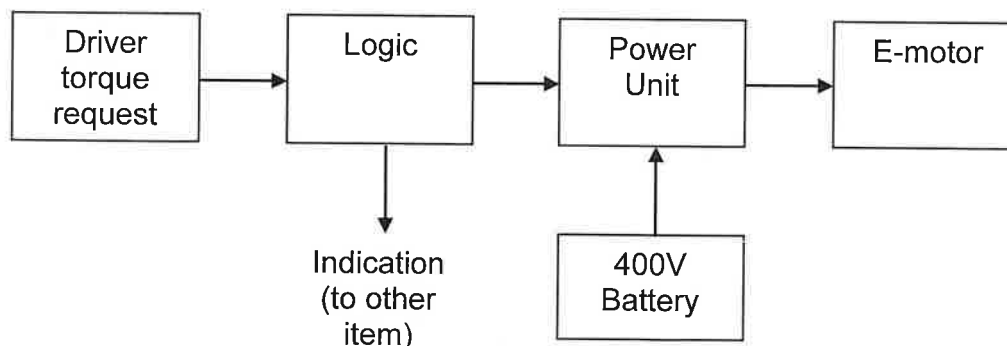

The considered item describes the function “Torque Demand” for the use in E-cars.

By pressing the acceleration pedal (by driver request) the corresponding torque shall be given from the E-motor

The function is used in serial passenger cars all over the world.

The energy supply is realized by a 400V battery. The driver shall be informed about operation and faults in the system.
